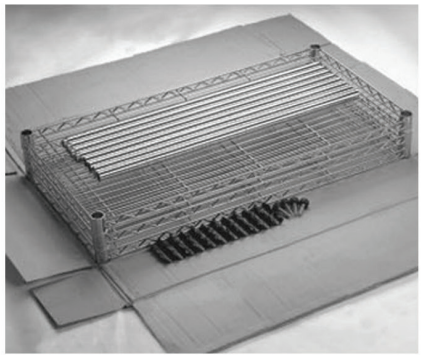
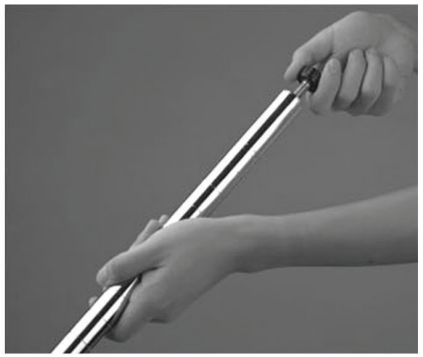
Installation Instruction



1.Check the parts list.

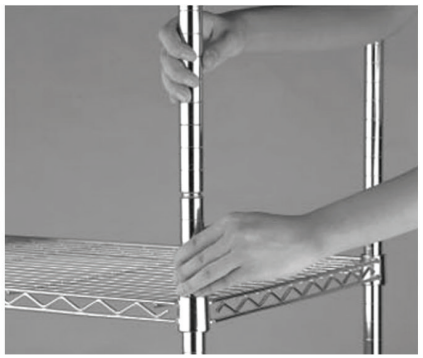


2. Screw the foot leveler or castor wheels to the lower post in a clockwise direction (The upper-post has a black plastic end cap at one end and the lower-post has a foot leveler attached).

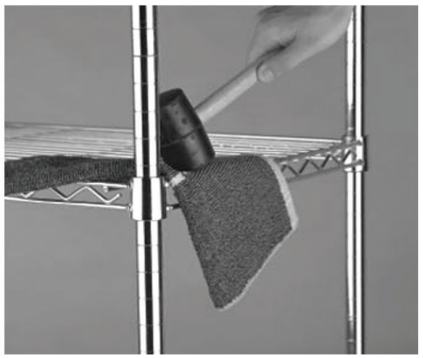
3. Snap the sleeves into the post groove. Sleeves must be snapped together with the small tapered side facing up.

4. Please make sure that you have the shelf the correct way up. Hold the shelf on its side and slide the top of the four posts trough the bottom of the shelf at its corners until there is a snug fit. After the four posts have been slid through the shelf corner holes, set the shelf upright.

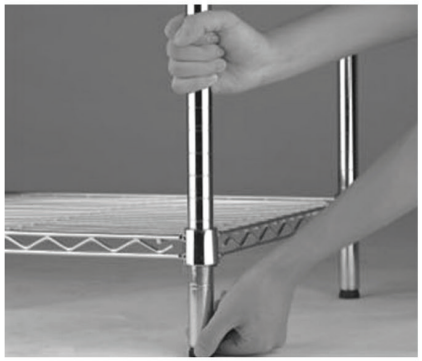
5. Snap the sleeves at your next desired shelf height. Slide the shelf down from the top of the posts onto the sleeves.



6. Screw the upper-post into the lower-post using the connectors which should already be screwed into one of the post halves. Then repeat step 5 for the remaining shelves. It is recommended that the top shelf be lined up in the upper-post groove.



7. Pushing firmly down on every shelf at corners by rubber mallet to secure the shelf in a place over the sleeves. (Using a rubber mallet can make installation easier-use caution not to damage the unit).



8. Screw the foot levelers in or out at the bottom of posts to attain proper leveling. Store-Shelf is now completely assembled.
